

Data Structure vs Database? Data Structure: In computer Programming, Data structure is a way of organizing and storing data so as to ease the accessing and modification of data. Some commonly used data structures are Array, Linked List, Stack, Queue, Heap, Binary Tree and Graph. Database: is a collection of data that is stored in an organized fashion in a table containing rows and columns using a software package known as Database Management System (DBMS). DBMS is used to modify, define, manipulate and manage data. Some examples of DBMS are: MySQL, Oracle Database and Microsoft Access.
